## COUNTRY 2304 MEADOW DRY

Grassland mixture for cutting and grazing or just cutting, also for peaty, wet and hilly areas

### Mixture composition

- 18 % Lolium perenne
- 18 % Festuca pratensis
- 19 % Phleum pratense
- 28 % Poa pratense
- 8 % Festuca rubra
- 9 % Trifolium repens

### Main characteristics

- The balanced mixture composition with a high content of Phleum pratense and Poa pratense leads to good winter-hardiness and persistence.
- This is valid especially for forage production in difficult areas like peaty, wet and hilly areas
- Lolium perenne gives good sward density and high feeding quality
- Poa pratense and Festuca rubra close gaps in the sward due to rhizome development
- Trifolium repens is responsible for an increase in nitrogen in the soil and digestibility of the harvested forage

All specified information is given to the best of our knowledge and belief, but without guarantee on completeness and correctness. Despite care we cannot guarantee that the described characteristics are repeatable / comprehensive in agricultural practice in each case. Euro Grass excludes adhesion for damage or claims for damages, resulting of the use for the variety specified in this description.
